Important Performance and Expense Information

All performance information reflects past performance, is presented on a total return basis, net of the Fund's investment advisory fee, and reflects the reinvestment of distributions and does not reflect the deduction of taxes that a shareholder would pay on fund distributions or the sale of fund shares. Past performance is no guarantee of future results. Current performance may be higher or lower than performance quoted. Returns as of the recent month-end may be obtained at www.royceinvest.com. The market price of the Fund's shares will fluctuate, so that shares may be worth more or less than their original cost when sold.

The Fund invests primarily in securities of small-cap and mid-cap companies, which may involve considerably more risk than investing in larger-cap companies. The Fund's broadly diversified portfolio does not ensure a profit or guarantee against loss. From time to time, the Fund may invest a significant portion of its net assets in foreign securities, which may involve political, economic, currency and other risks not encountered in U.S. investments.

Morningstar Style Map™ As of 12/31/23

The Morningstar Style Map is the Morningstar Style Box™ with the center 75% of fund holdings plotted as the Morningstar Ownership Zone™. The Morningstar Style Box is designed to reveal a fund's investment strategy. The Morningstar Ownership Zone provides detail about a portfolio's investment style by showing the range of stock sizes and styles. The Ownership Zone is derived by plotting each stock in the portfolio within the proprietary Morningstar Style Box. Over time, the shape and location of a fund's ownership zone may vary.

“We think the global markets offer terrific potential in a number of sectors and regions to find the kind of underappreciated, fundamentally solid company that have long been our focus here at Royce.”

—Chuck Royce

1. Royce classifies a client account as 'Core' because it anticipates the client account equity holdings will have a weighted average price-to-book ratio or weighted average normalized price-to-earnings ratio that is similar to, or somewhat higher than, its general asset class. 2. **Geometric Average.** This weighted calculation uses each portfolio holding's market cap in a way designed to not skew the effect of very large or small holdings; instead, it aims to better identify the portfolio's center, which Royce believes offers a more accurate measure of average market cap than a simple mean or median. 3. **Active Share** is the sum of the absolute values of the different weightings of each holding in the Fund versus each holding in the benchmark, divided by two. 4. **Net leverage** is the percentage, in excess of 100%, of the total value of equity type investments, divided by net assets. 5. **Harmonic Average.** This weighted calculation evaluates a portfolio as if it were a single stock and measures it overall. It compares the total market value of the portfolio to the portfolio's share in the earnings or book value, as the case may be, of its underlying stocks. 6. The **Price-to-Earnings Ratio** is calculated by dividing a company's share price by its trailing 12-month earnings-per-share (EPS) and also excludes companies with zero or negative earnings (15% of Portfolio holdings as of 3/31/24). 7. The **Price-to-Book Ratio** is calculated by dividing a company's share price by its book value per share (5% of Portfolio holdings were excluded as of 3/31/24).

2014	-6.2	1.8

Small-Cap Market Cycle¹ (NAV) Performance (%)

The Fund outperformed the MSCI ACWI SC in each of the three most recent full market cycle periods.

	RGT	MSCI ACWI SC
11/8/21-3/31/24 (Peak-to-Current)	-10.6	-5.6
1/17/20-11/8/21 (Peak-to-Peak)	40.6	39.5
1/26/18-1/17/20 (Peak-to-Peak)	4.3	2.3
6/23/15-1/26/18 (Peak-to-Peak)	38.6	32.1

¹Royce defines market cycles as peak-to-peak periods in which a peak is the market high prior to a decline of at least 15%.

Market Price Performance History Since Inception (10/17/13)

Cumulative Performance of Investment¹

	1-YR	5-YR	10-YR	15-YR	20-YR	SINCE INCEPTION (10/17/13)
RGT	20.7%	46.2%	74.8%	N/A	N/A	74.9%

¹ Reflects the cumulative performance experience of a continuous common stockholder who purchased one share at inception (\$8.975 IPO) and reinvested all distributions.

² Reflects the actual month-end market price movement of one share as it has traded on NYSE.

Adviser's Commitment to Stockholders

Royce Global Value Trust

- Listed on the New York Stock Exchange (Symbol: RGT)
- Average weekly trading volume of more than 104,600 shares

The Fund is a closed-end registered investment company whose shares of common stock may trade at a discount to their net asset value. Shares of the Fund's common stock are also subject to the market risks of investing in the underlying portfolio securities held by the Fund.

The **Morningstar Style Map** uses proprietary scores of a stock's value and growth characteristics to determine its placement in one of the five categories listed on the horizontal axis. These characteristics are then compared to those of other stocks within the same market capitalization band. Each is scored from zero to 100 for both value and growth attributes. The value score is subtracted from the growth score to determine the overall style score. For the vertical, market cap axis, Morningstar subdivides into size groups. Giant-cap stocks are defined as those that account for the top 40% of the capitalization of each style zone; large-cap stocks represent the next 30%; mid-cap stocks the next 20%; small-cap stocks the next 7%; micro-cap stocks the smallest 3%. **Market Capitalization** is calculated by multiplying a company's share price by its shares outstanding. **Standard deviation** is a statistical measure within which a client account's total returns have varied over time. The greater the standard deviation, the greater a portfolio's volatility. Source: MSCI.
